Research Questions

1. What is the current state of research?
2. How can gestures and voice commands be elicited?
3. What insights can be derived from the elicitation study?
4. Do users have a preference between voice vs gestures?

conversation/intuition

“back” to go to
previous step

Overall Observations

Technology should be receptive
to multimodal input

Interaction may change based on
affordances (i.e. hands not clean)

User Comments- Interaction & Strategy

Current technology influences

Visual cues (where to look)

Consistent Interaction (some want to interact spontaneously)

User Comments- Preferences

All would use non-preferred
method

Some said combo would be best
(together/not together)

Limitations & Conclusion

Procedure-Wizard of Oz

- We tell them what to achieve at each step
- They decide how to do it (using non-menu part of freedom)
- We know what output will be at each step
- Output is same regardless of input
- Consistency for everyone
- Each component (i.e. slider) mapped to our keyboard

Gulf of Execution

- Output the same regardless of input
- Consistency
- Keyboard mapping
- No technical problems with input recognition

Agreement Rates- Wobbrock

- r = referent in the set of all referents R
- P_r = set of proposals for referent r
- P_i = subset of identical symbols from P_r
- Range of equation: $1/|P_r| \cdot 100\% \leq A \leq 100\%$
- Lower bound is non-zero because even when all proposals disagree, each one trivially agrees with itself.
- i.e. if 15 out of 20 users proposed one gesture while 5 proposed another gesture for the same referent, r , $[(15/20)^2 + (5/20)^2] / 1 \cdot 100\% = 62.5\%$ is the agreement rate.
- few gaps in this calculation: i.e. trivial agreement even when all proposals were unique

$$A = \frac{\sum_{r \in R} \sum_{P_i \subseteq P_r} \left(\frac{|P_i|}{|P_r|} \right)^2}{|R|} \cdot 100\%$$

Agreement Rates- Vatavu

- i.e. 20 participants
- $|P|=20$ proposals were collected for a given referent r
- 15/20 proposed one gesture and 5/20 propose another, i.e., $|P_1|=15$ and $|P_2|=5$
- # of pairs of participants in agreement w/ each other: $(15 \cdot 14)/2 + (5 \cdot 4)/2$
- Total # of pairs that could have been in agreement: $(20 \cdot 19)/2$
- Dividing 2 values: $AR(r) = (115/190) = .605$ is obtained
- By comparison, Wobbrock: $(15/20)^2 + (5/20)^2 = .625$
- Both Wobbrock, Vatavu assume each participant only proposes one gesture

$$AR(r) = \frac{\sum_{P_i \subseteq P} \frac{1}{2} |P_i| (|P_i| - 1)}{\frac{1}{2} |P| (|P| - 1)}$$

Agreement Rates- max consensus

$$\frac{\max_{P_i \subseteq P} |P_i|}{|P|}$$

- For multiple proposals by one participant
 - $|P|$ = # of participants
 - P_i = set of participants who made proposal i
 - $\max_{P_i \subseteq P} |P_i|$: # of participants who made the most popular proposal
 - Drawback: case where there is no consensus among participants. I.e. 2 people each propose something different: $\frac{1}{2} = 50\%$ as the “max consensus” or “the percent of participants suggesting the most popular proposed interaction”.
- This is unexpected since there is, in fact, 0 agreement amongst the 2 participants.

Agreement Rates-Chen

gap where there is no valid calculation for the case in which there are multiple proposals by the same participant as well as a 0 consensus amongst proposals of all participants

min value	Never 0	0
<i>applicable study</i>		
<i>Single-proposal</i>	Wobbrock <i>et al.</i> 's formula	Vatavu <i>et al.</i> 's formula
<i>Multi-proposal</i>	Morris' max-consensus	?

Agreement Rates- Chen

$$AR = \frac{\max_{P_i \subseteq P} |P_i| - 1}{|P| - 1}$$

- multiproposals by single participants in + consensus amongst all participants' proposal is 0
- $|P|$: # of participants
- P_i = set of participants who made proposal i
- $\max_{P_i \subseteq P} |P_i|$: # of participants who made the most popular proposal
- In this case, if 2 users proposed diverging inputs, the percentage would be $(1-1)/(2-1) = 0\%$

Agreement Rates-Chen

Allows for different # of proposals from each participant

"id 1": "gesture A",
"id 2": ["gesture B", "gesture A"]

According to my formula, $P = \{\text{"id 1"}, \text{"id 2"}\}$, therefore $|P| = 2$; $P_{gesture A} = \{\text{"id 1"}, \text{"id 2"}\}$,

$P_{gesture B} = \{\text{"id 2"}\}$, thus $\max_{P_i \subseteq P} |P_i| = 2$. This results in an agreement rate of 1 which is justified

given that "id 2" does not discriminate between her two proposals. Another example is the "total

Legacy Bias

- What people know can influence their elicitation
 - People usually force different interactions
 - We allowed them to interact organically
- Same or different every time if they want
- Pros: organicness and whether they *choose* to use same or not

	Proposal 6	"next step tim"	"next"	"next step"	"next"	"ok whats next"	"next"	"next"	"ok next"	"next"	8 out of 8	
	Proposal 7	"next step tim"	"next"	"next step"	"next"	"done that whats next"	"back" "next"	"next"	"yeah next"	"next"	8 out of 8	
	Proposal 8	"next"	"next"	"next step"	"next"	"whats next"	"next"	"next"	"yeah done next"	"next"	8 out of 8	
	Task's Emerging Command										"next"	
Final Command - based on all proposals (& Number of Users Who Ever Proposed It)										"next"	16 out of 16	
Agreement Rate										1		

NOTE: "ok" was not meant as a part of the command, but since it emerged amongst multiple participants, it was analyzed as well. This is further discussed in chapter 4

Voice Rules

- 1) Arbitrarily, more than 25% of users have to propose something in the same proposal round for it to be considered (at least 3 out of 8 in this case).

Proposal 6	"next"	"k next"	"next step"	"ok next"	"next step"	"last step go back"	"next step"	"next step"	"next"	"ok next"	"[ok] + 'next' + 'step'"	5 out of 8
Proposal 7	"next"	"next"	"yeah next step"	"next"	"next step"		"next step"	"next"	"ok next"	"ok next"	"next" + "step"	3 out of 8

Figure 73: “Ok” is used at least 3 times in proposal 6, so it appears as a part of the emerging command. It is only used once in proposal 7, so it does not appear there.

- 2) If there are uncommon factors amongst the emerging command proposals of one task, those factors are removed from the emerging command of that task.

Referent	Generic Participant Number	P9	P10	P11	P12	P13	P14	P15	P16	Emerging Command	Number of Users	
Cooking a Recipe	Proposal 1	"ok next"	"next"	"ok next step"	"ok next"	"k next step"			"uh next"	"[ok] + 'next' + 'step'"	5 out of 8	
	Proposal 2	"next"	"next"	"next step"	"next"	"next step"			"uh next"	"next" + "step"	3 out of 8	
	Proposal 3	"ok next"	"next"	"ok next step"	"ok next"	"next step"			"uh next"	"[ok] + 'next' + 'step'"	5 out of 8	
	Proposal 4	"ok next"	"next"	"k next step"	"next"	"next step"			"uh next"	"next" + "step"	3 out of 8	
	Proposal 5	"k next"	"k next"	"k next step"	"next"	"next step"			"uh next"	"[ok] + 'next' + 'step'"	5 out of 8	
	Proposal 6	"next"	"k next"	"next step"	"ok next"	"next step"	"last step go back"	"next step"		"ok next"	"[ok] + 'next' + 'step'"	5 out of 8
	Proposal 7	"next"	"next"	"yeah next step"	"next"	"next step"			"ok next"	"next" + "step"	3 out of 8	
Go to Next /	Task's Emerging Command									"next" + "step"	3 out of 8	

Figure 74: “Ok” is not used as a part of emerging command for all proposals. However, “next” + “step” is a common factor throughout. Thus, “ok” is removed from the task’s emerging command.

Voice Rules

3) Furthermore, if there are uncommon factors amongst the emerging command of the two tasks, those factors are removed from the final command.

Task's Emerging Command										"next"																																																																																																																																						
Final Command - based on all proposals (& Number of Users Who Ever Proposed It)										"next"	16 out of 16																																																																																																																																					
Agreement Rate										1																																																																																																																																						

NOTE: "ok" was not meant as a part of the command, but since it emerged amongst multiple participants, it was analyzed as well. This is further discussed in chapter 4

Figure 75: "step" is used as a part of the cooking a recipe task's emerging command. However, it is not used as a part of the fixing a boombox task's emerging command. Nonetheless, "next" is a common factor in both. Thus, "step" is removed from the final command, and "next" is considered as the final command.
